1. As of 1 April 2004 statistical reporting of total government, government guaranteed and consolidated debts has changed. The practice adopted as of February 2003 of reporting bond obligations at acquisition value has been discontinued. After the change, securities included in the stock of domestic and external debts are reported at nominal value.
 2. The IMF extends its tranches to the central bank which then on-lends them to the government under Article 45 of the Law on the BNB. So far, the credits extended by the BNB to the MF are reported as domestic government debt to the BNB, on the one hand, and external debt of the BNB to the IMF, on the other hand. In the *Government Debt Management* bulletin, debt to the IMF is included in the external debt structure and excluded from domestic debt structure in order to avoid any mistakes in using debt information.
 3. Debt recalculation in US dollars and euro is based on BNB exchange rate of the relevant currency against the lev for the last business day of the respective period.

In the structure of external debt by type of creditor bonds (global bonds and eurobonds) occupied the largest share, totaling 30.7 per cent, followed by domestic debt (government securities) 25.1 per cent, obligations to the World Bank 13.4 per cent, on government investment loans 9.9 per cent and on government guaranteed debt 9.4 per cent (Chart 23).
